

OPENING THE DOOR TO SCHOOL SAFETY

Modifying building codes to allow for door barricade devices might keep a gunman out of classrooms, but the unintended consequences associated with the devices could put children at even more risk and the school in liability. Yet, many states are seeking to change their codes under the false pretenses that door barricade devices are the only product that can secure a classroom.

UNINTENDED CONSEQUENCES

Although widely publicized, school shootings are very rare. In fact, nonfatal victimizations such as bullying and physical attacks by students are much more likely to occur. According to the National Center for Education, in 2012, students ages 12-18 were victims of more than 1.37 million nonfatal victimizations at school, including 615,600 thefts and 749,200 violent victimizations; 89,000 of which were serious violent victimizations.

According to the Centers for Disease Control and Prevention and the FBI, students, not outsiders, are the most likely people to commit violence on school grounds. Storing a barricade device in a classroom makes crimes easier to carry out. As seen in the school shootings at Virginia Tech, the West Nickel Mines schoolhouse and Platte Canyon High School, shooters often barricade themselves in a classroom with others to cause harm or take hostages.

DOOR SECURITY GUIDELINES

The National Association of State Fire Marshals guidelines address door security devices, which are mandatory in many states as they are included as part of the International Building and Fire Codes and Life Safety Codes. They mandate that locking mechanisms should be able to do the following:

1. provide immediate egress by being located between 34" and 48" above the floor, and not require special knowledge or effort, nor key or tool, nor require tight grasping, twisting, or pinching to operate, and accomplished with one operation
2. be easily lockable in case of emergency from within the classroom with an authorized credential (key, card, code, fob, fingerprint, etc.) and without opening the door
3. lockable and unlockable from outside the door with an authorized credential

THE SOLUTION

There are a variety of door hardware companies that provide specifically designed classroom security locking functions that meet the code requirements. These locksets, which allow users to quickly lock the door from either side, meet code requirements for free egress, fire protection and accessibility. They are the fastest and safest solution for "lockdown" situations.
